### MEDITATION GARDEN

Gardens are multi-functional living spaces that must fulfill particularly exacting demands in the private residential sector. In recent years, need for tranquility, contentment and equilibrium has increased. Based on the model of Asian Zen gardens, the demand for meditative gardens arose in Europe. A place for meditation can be set up anywhere. Ambling through sections of the garden on a journey of meditative observations, the visitors can take pleasure in the contemplative atmosphere and are guided into a world free from worry. Sculptures and wind chimes add a personal touch and benevolent spirit.
